

TruGuard UV Protection Sunscreen For Your Art

What You Should Know About Light and Your Artwork.

The very thing that allows us to enjoy photographs and artwork also works to destroy them. This is called ultraviolet light or UV. UV light rays are one of the most dangerous elements that your artwork can encounter. The same light that causes sunburn and wrinkles will also ruin your framed memories, turning them yellow and brittle and making their colors less vibrant.

UV light causes irreversible damage to your framed artwork. Simply keeping your frames out of direct sunlight is not enough. UV light is present in every light present in your home and office – skylights, unshaded windows, even fluorescent and halogen bulbs.

It it's Worth Framing... Frame it to last!

The easiest, most efficient way to help prevent UV light damage is to specify TruGuard UV Protection Glass. By specifying Tru Vue Conservation Series Glass, you are insuring that at least 97% of these most damaging light rays are filtered out before ever coming into contact with your valuables. TruGuard UV Protection conservation quality picture framing glass is specifically formulated to protect framed works of art from the damaging effects of ultraviolet light without affecting the look of the framed image.

Tru Vue offer four types of glass available with TruGuard UV Protection

All four types block a minimum of 97% of harmful UV light rays.

CONSERVATION CLEAR

Looks like regular glass but blocks UV light

CONSERVATION REFLECTION CONTROL

A non-glare glass ideal for frames with 1-3 mats

CONSERVATION PERFECT VUE

A high quality non-glare/anti-reflective glass which is ideal for frames with 3-5 mats

MUSEUM GLASS

A nearly invisible glass with almost no reflection – excellent for all your framing projects including shadow boxes and deep mat depths
